

Principal characteristics

- The transducer is designed to satisfy extreme applicative demands in terms of mechanical strength.
- The 10 mm diameter rod, large steel joints, and reinforced structure make this series mechanically ideal for metalworking, woodworking, and ceramics.
- Installation is simplified by the lack of electrical signal variation at output outside theoretical electrical stroke.
- The structure based on self-aligning and weight-bearing ball joints permits assembly with free movement of the transducer axle.

ELECTRICAL CONNECTIONS

INSTALLATION INSTRUCTIONS

- Respect the indicated electrical connections (DO NOT use the transducer as a variable resistance)
- When calibrating the transducer, be careful to set the stroke so that the output does not drop below 1% or rise beyond 99% of the supply voltage.
